

# Biomass Manager

**Grainit BiomassManager is a management and documentation tool for co-digestion biogas plants.**

**The system has been used at biogas plants for 5 years, so it's a proven tool with new functions added every week and are being used in multiple countries.**

- 
- Web and cloudbased portal for setup, planning and reporting
  - Integrated with weighbridge, big mixers, flow sensors and scada/plc
  - Tablet/smartphone app for truckdrivers for registrations
  - Tablet/smartphone app for feed mixers on the plant
  - Setup for sampling of dry material
  - Real time calculation of gas potential
  - ERP/billing systems integration for invoicing
  - Individual user setup
  - Feeding plan management
  - Mass Balance module
  - Transport documents for Bio-LNG
  - Full tracking of all supplies
  - Contract management
  - Stock and inventory
  - Portal for suppliers
  - NPK in raw materials and fertilizer

- Frontpage
- News
- Summary of stocks
- Customers and suppliers
- Consumption overview
- Dry material sampling
- Dashboard
- Reports
  - Energy crops percent
  - N status
  - Tons status
  - Locations out status
  - In/out status
  - Fertilizer reporting
  - Production overview (beta)
  - Production graph
  - Transport this week

### In/out status
